GS1 INDIA | CUSTOMER INTELLIGENCE

CEO decision memo | 20 October 2026 snapshot | Synthetic source extracts

Decision in one line: Pilot targeted activation and renewal outreach, while auditing a small set of post-expiry records. Do not equate GTIN-creation inactivity with lost customer value.

1 Engagement opportunity is large; value loss is unproven

26,718 / 37,419 GCPs (71.4%) in the validated matched population are quiet (4,250), dormant (18,190) or have zero recorded GTINs (4,278). GTIN creation may be episodic; previously issued barcodes can continue to deliver value. **Risk:** an untargeted retention campaign could misclassify healthy customers.

2 Post-expiry creation merits focused investigation

14 / 1,133 expired GCPs (1.24%) have a last GTIN creation date after the recorded subscription expiry. The extracts do not contain complete renewal history or access logs. **Risk:** potential entitlement control gaps, but no demonstrated unauthorized access or quantifiable leakage.

3 Usage differs by plan; headroom is not measurable

Median cumulative GTINs: **Basic 25; Premium 42; Trace 23**. This supports plan-level segmentation, not a claim that a GCP is near capacity. GCP allocation limits, entitlements and prices are absent. **Opportunity:** investigate high-volume accounts for appropriate plans; revenue uplift cannot yet be estimated.

One recommendation | 30-day targeted pilot

Owner: Head of Commercial, supported by Product and Data. Prioritize upcoming renewals with unobserved activation or prolonged GTIN-creation inactivity; run a comparison/holdout group; separately reconcile the 14 post-expiry cases against renewal and access records. **Measure:** incremental renewal conversion, contact cost and confirmed entitlement exceptions. **Value at stake:** not monetizable from these extracts alone; obtain plan fees and renewal outcomes first.

Evidence note: 37,477 GCPs in cleaned model; 37,410 scoreable; 67 require review. GCP is not identical to customer/company. Duplicate GCPs, sentinel GCP 0, and inconsistent dates were flagged or quarantined. Fixed analysis date makes results reproducible.
